

January

Dear Parents,

January is Vision Health Month. Prevent Blindness America estimates that 1 in 20 preschoolers has a vision problem. If you notice any of the following problems, have your child examined immediately so that it does not become permanent.

- Constant eye rubbing
- Extreme light sensitivity
- Encrusted eye lids
- Abnormal movement of eyes
- Tilts head or turns head to one side
- Crossed eyes
- White spot in pupil
- Chronic tearing or redness of eye

Feel free to call me if you have any questions.

Thank you,

Nurse Sue
