

Dental Emergency!!

Would you know what to do if your child knocked out a tooth? *(Keep this information....you may need it someday!)*

- Permanent:
1. Find the tooth (Do not handle by the roots!)
 2. If dirty, rinse with warm water. (Do not scrub it!)
 3. Gently insert the tooth in its socket or place in a glass of milk. (The tooth must not dry out.)
 4. Take the child and tooth immediately to the dentist.

- Baby Tooth:
1. Do not put a baby tooth back in its socket!
 2. Place the tooth in milk or water.
 3. Take the child and tooth immediately to the dentist.

Thank you,
Nurse Sue
